Front End

LMS Username	Name	Batch
2111a4514	Sanjay N	A5
2111a4519	Vedhagiri R	A5
2111a4521	Gowtham Niksan E	A5
2111a456	Loganathan S	A5

Task - 2

Create UI and implement various components using react

- Split design into components and Higher order Components
- Define structure of the components
- Set the basic ui components with dummy data

Integrate the APIs to frontend to ensure the dynamic feature of website

- Point base api to the severs base url
- Design api calls for each element
- Handle errors in the output
- Render output of apis to different low level components
- Secure content of post apisx

Evaluation Metric:

- 100% Completion of the above tasks

Learning Outcome

- Developing complicated UI using react components
- Using props drilling and context to pass variables
- Getting familiar with different type of api calls
- Handling different input data

Step-Wise Description

- This project was E-commerce website . This website name is Ecom.We where creating LOGIN page,SIGN UP page,HOME page,ACCOUNT page.
- **HOME page contains** our website logo,Account option,About us option,Contact option And Search bar.
- Then Product view interface in home page,product details option,buy option,Add to cart option.
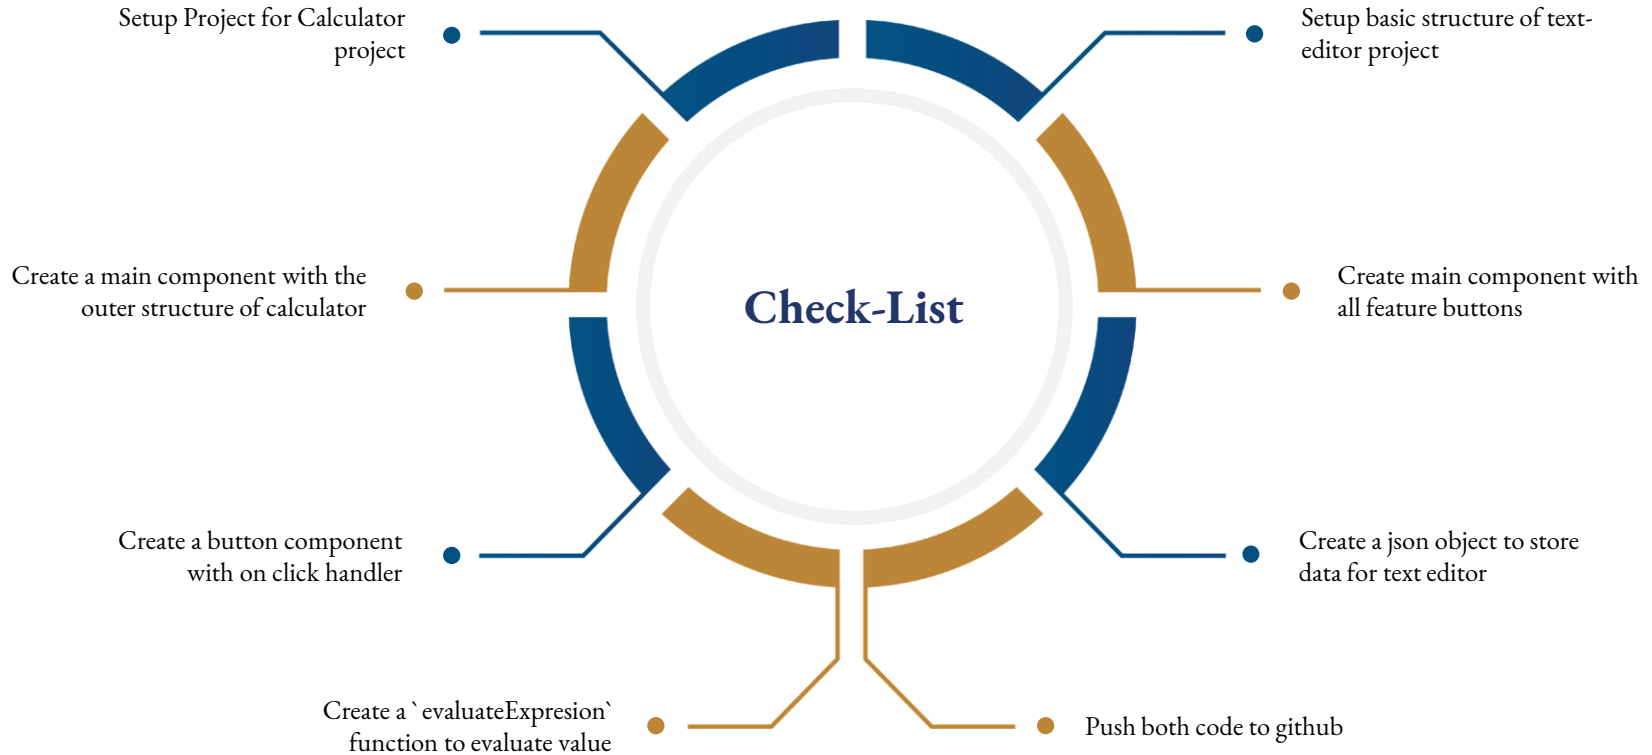

Account page contains

1. Track your order option
2. Your order option
3. Return to purchase option
4. Help option
5. Setting option.

Summary of your task

The main purpose of this website is to purchase the minimal Moblie accessories which are backcase ,temperglasses etc. Has so we are add further product on this Ecom website in future.

Assessment Parameter

Setup Project for Calculator project

Setup basic structure of text-editor project

Create a main component with the outer structure of calculator

Check-List

Create main component with all feature buttons

Create a button component with on click handler

Create a json object to store data for text editor

Create a `evaluateExpresion` function to evaluate value

Push both code to github
